

# **UNDERSTANDING THE 6<sup>th</sup> SCHEDULE IN DEPTH**

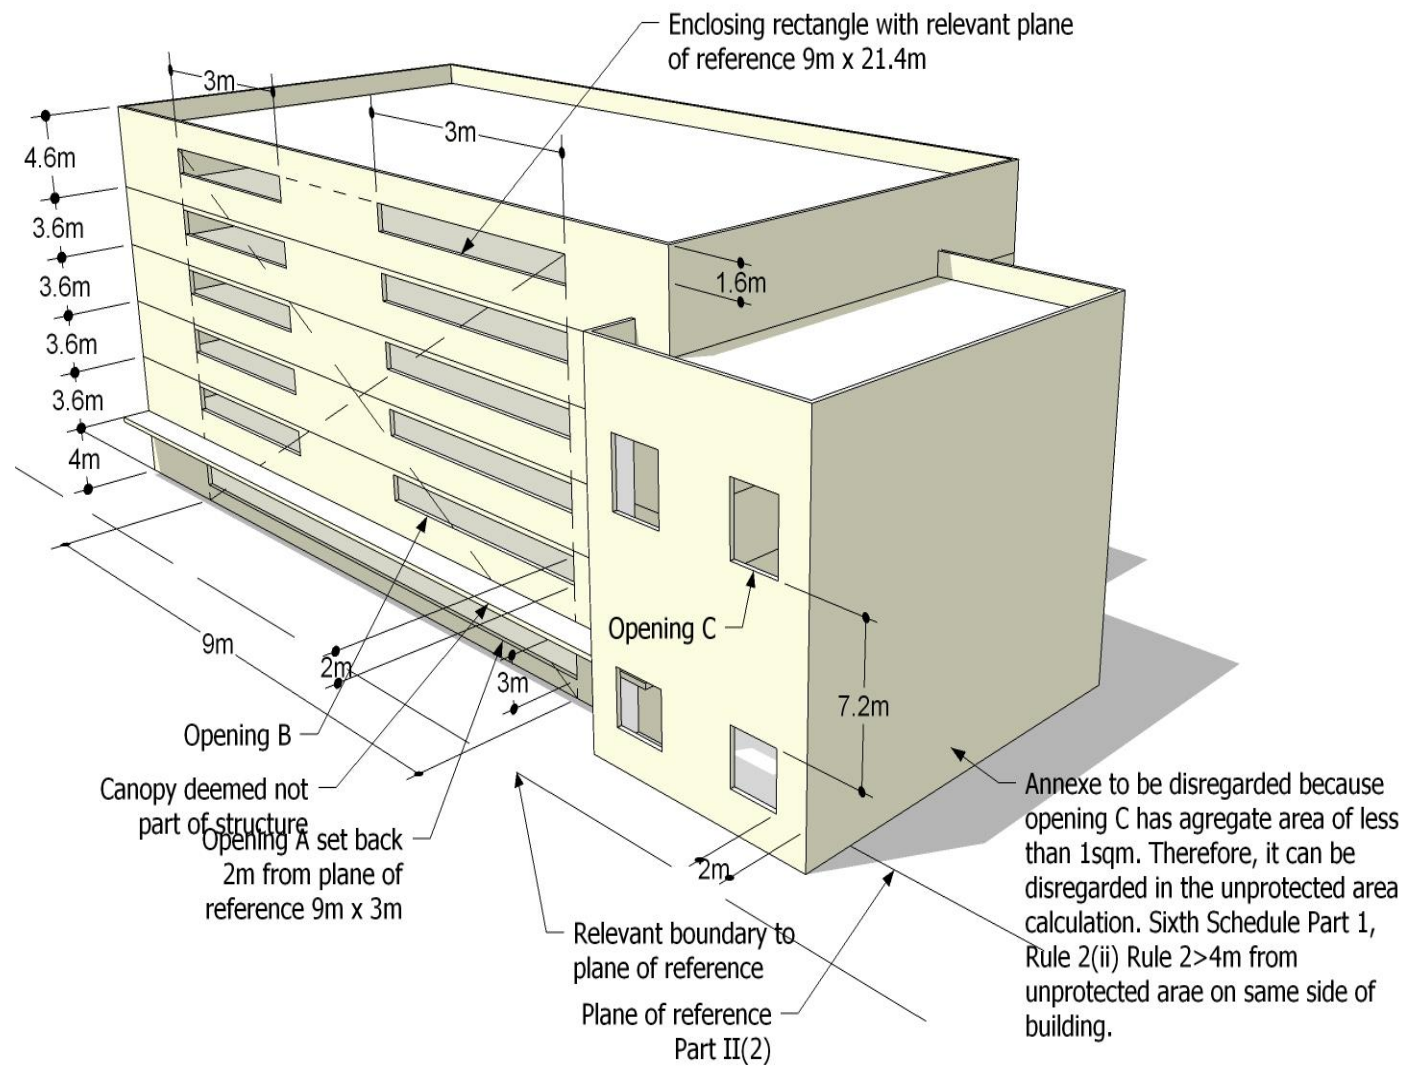

## **MODULE 3: USING UBBL SCHEDULE 6**

**By Ar Ridha & Ar Adrianta**

# **SAMPLE CASE STUDY CALCULATION OF 6<sup>TH</sup> SCHEDULE AND AGREGATE NOTIONAL AREA**

You are given an office façade with 2 different window size opening.  
Calculate the distance of the allowable relevant boundary and aggregate notional area

# WHAT DOES THE QUESTION WANTS?

Objective is to check if the front façade design complies with Sixth Schedule

Compliance to part	Objective
Part II (Rules of Calculation by reference to an Enclosing Rectangle)-	<ol style="list-style-type: none"><li>1. To calculate relevant boundary distance</li><li>2. to determine limit of un protected opening</li></ol>
Part III (Rules for Calculation by reference to Aggregate Notional area)-	<p>To calculate whether relevant boundary distance comply to aggregate notional area allowed in schedule</p> <ol style="list-style-type: none"><li>1. 210sqm- I.II.III.IV, VII</li><li>2. 90 sqm – purpose group V,VI,VIII</li></ol>

# GENERAL ASSUMPTION

## **Design parameter existing & Assumptions made :**

1. Purpose Group : IV (Office)
2. Assume design for : Building façade is 7.5 meter to centre of road
3. Building not compartmented
4. Annexe block to be disregarded

# STEP 1 : Establishing plane of reference

Establish a **plane of reference** which is the most favorable for the side of the building under consideration it touches all or part of the side. Normally it will be best for the plane of reference to be roughly parallel to the relevant boundary.

## PLAN

## ELEVATION

# STEP 2 : Determination the area of exposure of fire

## - Establish Enclosing Rectangle Size

Enclosing rectangle = area of façade which encloses all unprotected area

### DEFINE Enclosing Rectangle

Calculation:

Width façade : 9m

Height Façade : 21.4 m

Enclosing rectangle

= Width X Height

=192.6 sqm

# STEP 3: Determining Unprotected Area

## Calculate Area of Unprotected Openings

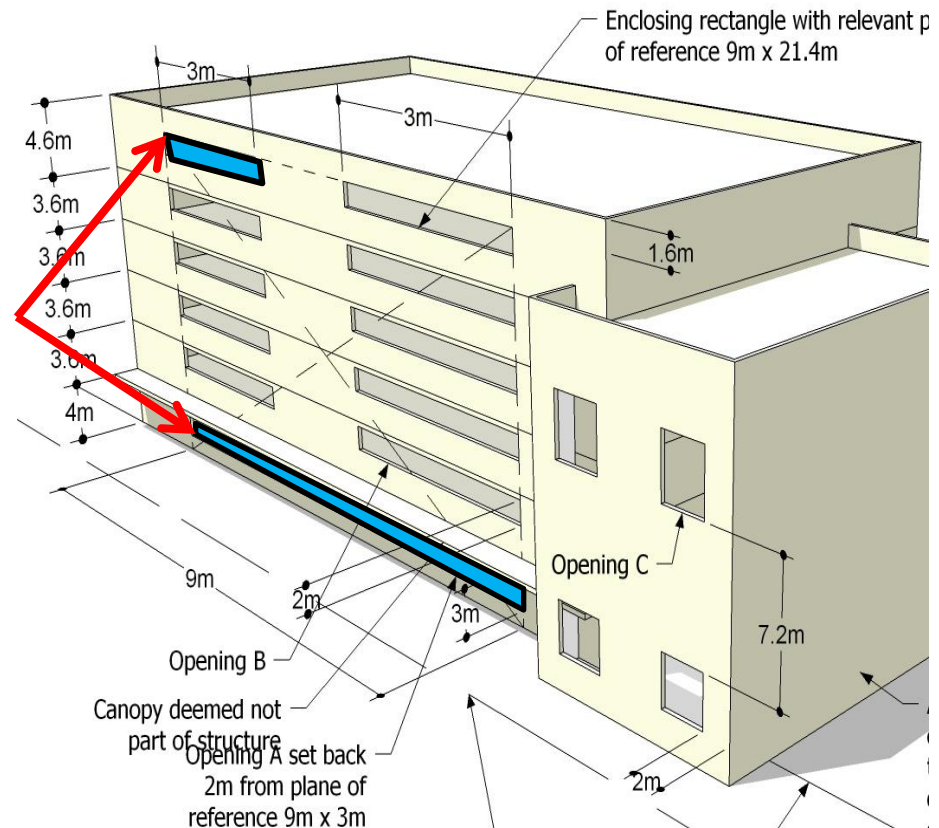

Unprotected Openings = Unprotected Openings such as windows and void openings

Calculation of window openings:

10 nos 3m x 2m windows on upper flrs = 60sm

1 no 9m x 3m window on Grd Level = 27sm

Total Area of Unprotected Openings = 87sm

# STEP 4: Determining Unprotected Area

## Calculate Percentage of Unprotected Openings

Percentage of unprotected opening in rectangle =  
Percentage ratio of unprotected area on the wall surface

Percentage of Unprotected  
Opening in Enclosing  
Rectangle is:

= Total window area divide  
by total façade area  
= 87 sqm / 192.6 sqm  
= 45.17%

# STEP 5 : For Compliance with Schedule 6 Part II

Establish the parameters enclosing Rectangle:

Look for relevant Table in schedule 6 at part II-

1. Select table for Purpose Groups I (Small Residential), II (Institutional), III (Other Residential), **IV (Office)** and VII (Assembly)
2. Select the next highest height, if 21meters, select 24 meters table

Width

Reading from the 9m Row,

Permitted minimum:

For 50% Unprotected Opening, the distance to Relevant boundary should not be less than 5.5m

Design for:

Distance to Relevant Boundary = 7.5m (set back from relevant boundary) is more than what requires of 5.5 meters

Therefore Façade complies with Sixth Schedule Part II

## STEP 8 : For Compliance with Part II – check your design for any adjustments

Enclosing Rectangle, if one uses the

Permitted : 45.17% permitted opening refer to 50% , 5.5m from relevant boundary

Design for : For 7.5m distance to Relevant Boundary as the basis, reading upwards, one finds that the maximum percentage of unprotected opening is 70%,

therefore, the façade design satisfies Part II of the Sixth Schedule and designer have an option to add more openings from 45.17% to 50%.

In UK they have updated their UBBL, If add sprinkler, 2 options

1. Relevant boundary can be half of what is given- example 7.5 become 3.25 or,
2. If already comply with the relevant boundary distance, can double the unprotected area – example 87sqm becomes 174 sqm, become 90% and relevant boundary 9 meters

Source: **The Building Regulations 2000: approved document, B: Fire safety ..., Volume 2** By Stationery Office, Great Britain

**In UBBL Malaysia, this is not captured in the by laws.**

## STEP 9 : Determine factor in Part III- Distance of Relevant boundary will determine factor to be use

Relevant boundary distance establish in design : 7.5 meter

Check table to get the factor

TABLE OF FACTORS		
Distance of unprotected area from vertical datum in metres		Factor
Not less than	Less than	
1	1.2	80
1.2	1.8	40
1.8	2.7	20
2.7	4.3	10
4.3	6.0	4
6.0	8.5	2
8.5	12.0	1
12.0	18.5	0.5
18.5	27.5	0.25
27.5	50	0.1
50	No limit	0

Table of factors for distance to vertical datum between 6.0 to 8.5m is 2

## STEP 10 : Calculation compliance to aggregate notional area

Total Area of Unprotected Opening is 87sm for office building (purpose group IV)

Aggregate Notional Area is :

area of Unprotected Opening                      X                      Factor in table factor PART III schedule 6

**87 sqm X 2 = 174 sqm**

Part III Rule 1 says aggregate notional area at side building must not exceed

1. 210sqm- I.II.III.IV, IV
2. 90 sqm – purpose group V,VI,VIII

Therefore, façade of office building with 187 sqm which is less than 210 sqm satisfies Part III Rule 1(a) of Sixth Schedule

# 10 STEPS TO CALCULATE SCHEDULE 6

**STEP 1: Establish Plane of reference**

**STEP 2 : Determination the area of exposure of fire - Establish Enclosing Rectangle Size**

**STEP 3: Determining Unprotected Area - Calculate Area of Unprotected Openings and smallest enclosing wall of opening**

**STEP 4: Determining Unprotected Area- Calculate Percentage of Unprotected Openings**

**STEP 5 : For Compliance with Schedule 6 Part II –Establish parameters of the enclosing rectangle : Height, width, percentage of unprotected openings.**

**STEP 6 : Determination of Relevant boundary Distance- Go to Table for related purpose group with enclosing rectangle required high and width.**

**STEP 7 : For Compliance with Part II – check relevant boundary permitted**

**STEP 8 : For Compliance with Part II – check your design for any adjustments**

**STEP 9 : Determine factor in Part III- Distance of Relevant boundary will determine factor to be use**

**STEP 10 : Calculation compliance to aggregate notional area**

**THANK YOU**
